

Academy Of Health Sciences, Lodhran

1. Define tissue?
2. What are the different types of tissues in human body?

| Tissue | Description |
|------------|-------------|
| Epithelial | |
| Connective | |
| Muscular | |
| Nervous | |

3. How we classify epithelial tissues?

| | Simple | Stratified | Pseudo stratified |
|----------|--------|------------|-------------------|
| Squamous | | | |
| Cuboidal | | | |
| Columnar | | | |

4. What are the different functions of epithelial tissues
 - i. Protection
 - ii. Secretion
 - iii. Excretion
 - iv. Absorption
 - v. Others

Academy Of Health Sciences, Lodhran

5. Mention the location and the functions of the epithelial tissues

| Tissue | Location | Function |
|-----------------------------------|----------|----------|
| Simple squamous ET | | |
| Stratified squamous ET | | |
| Simple cuboidal ET | | |
| Stratified cuboidal ET | | |
| Simple columnar ET | | |
| Stratified columnar ET | | |
| Pseudo stratified columnar ET | | |
| Ciliated columnar ET | | |
| Stratified keratinized sq. ET | | |
| Stratified non-keratinized sq. ET | | |
